Cybersecurity Assessment Report

Vulnerability Assessment | Phishing Detection | API Security

Prepared by: Anuj Kumar

The objective of this project is to identify common security vulnerabilities, detect phishing emails, and analyze API security risks.

USED TOOLS

Nmap
OWASP ZAP
Mail Parser
Postman
Browser DevTools

Overview

TASK:- 1

The web application was tested to identify vulnerabilities and security misconfigurations.

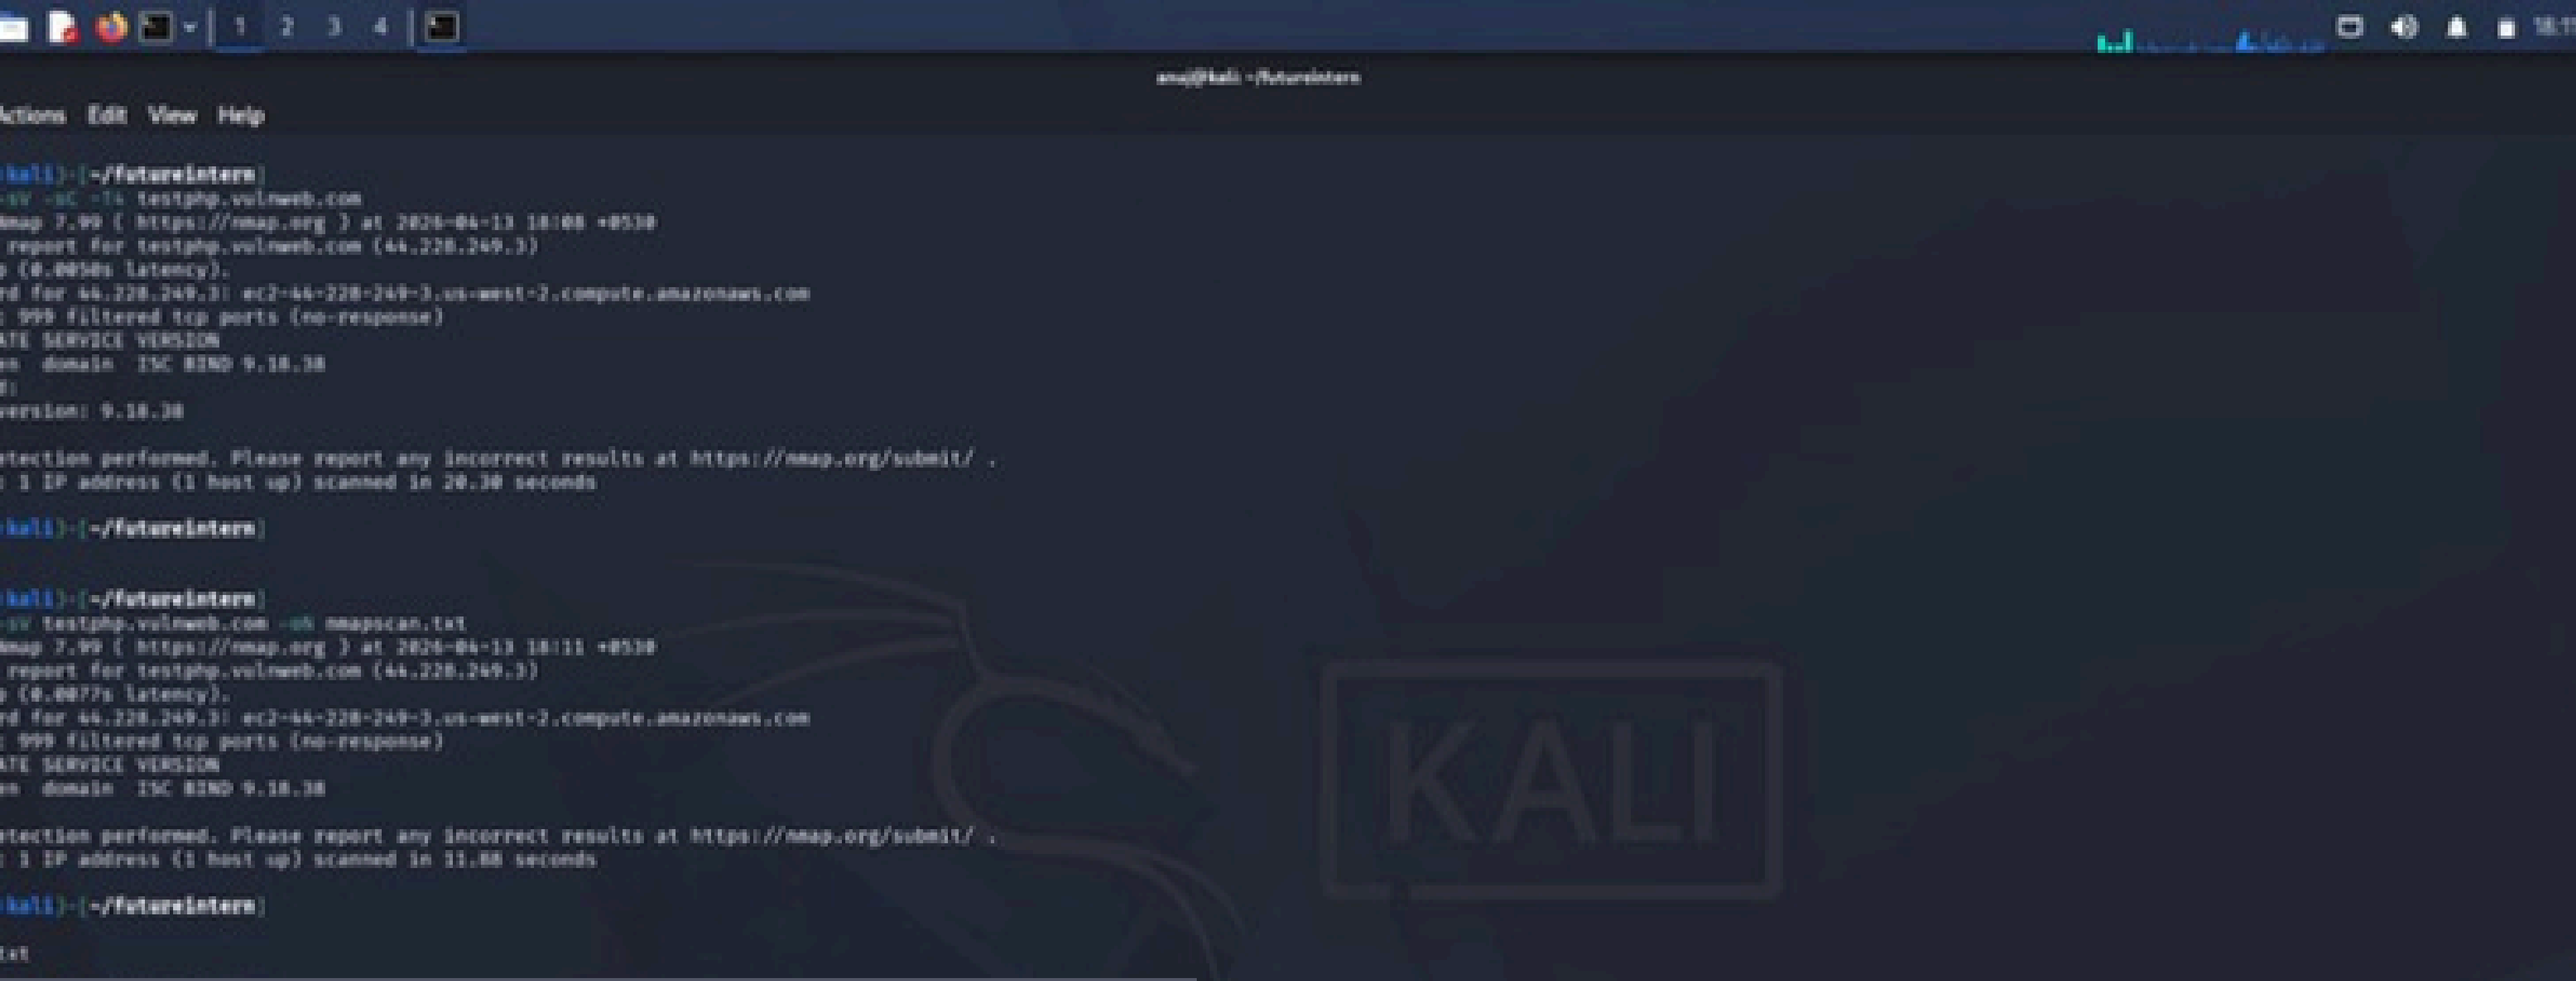

Figure: Nmap scan showing open ports

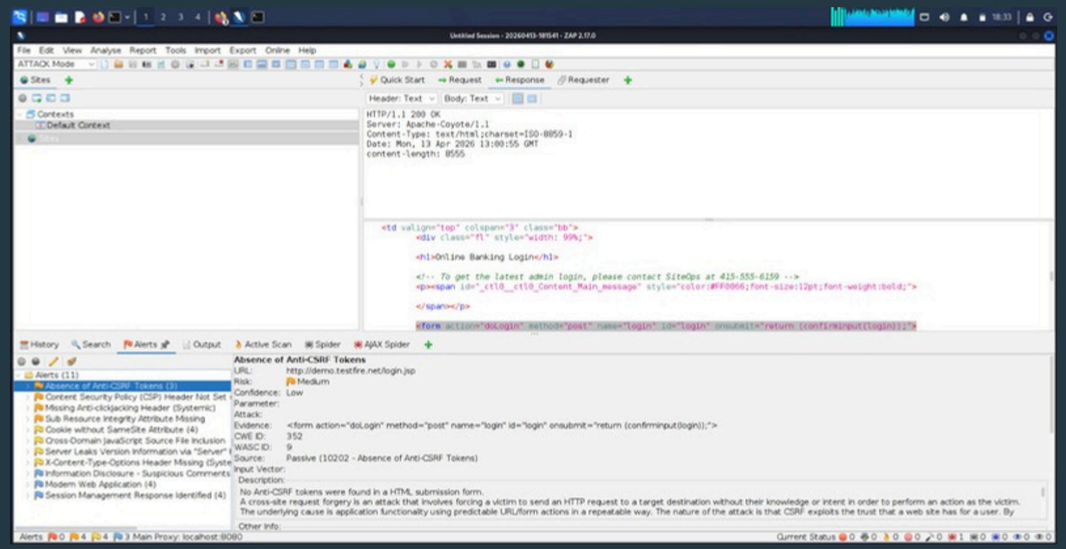
Figure: Vulnerability scan results

Issue: Information Disclosure

Risk: Low



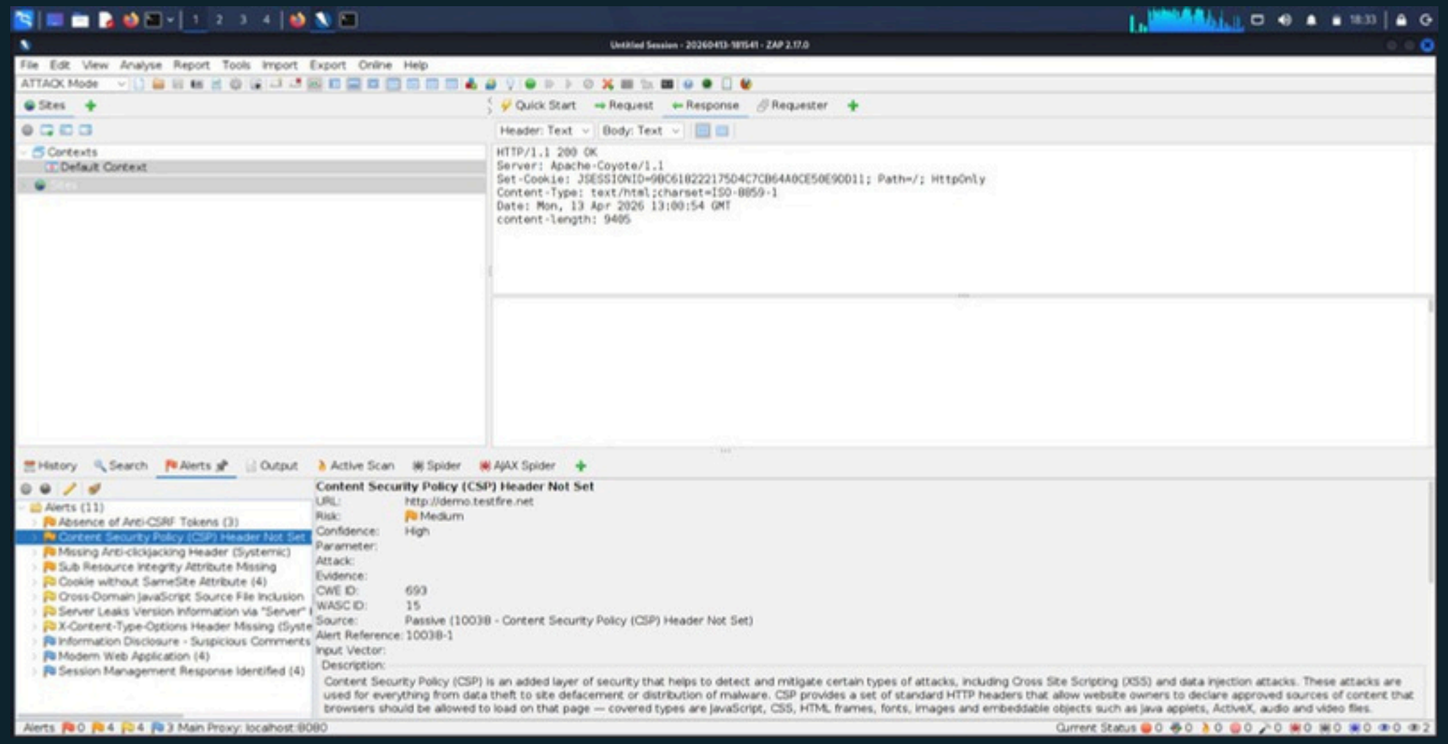


Figure: Vulnerability scan results

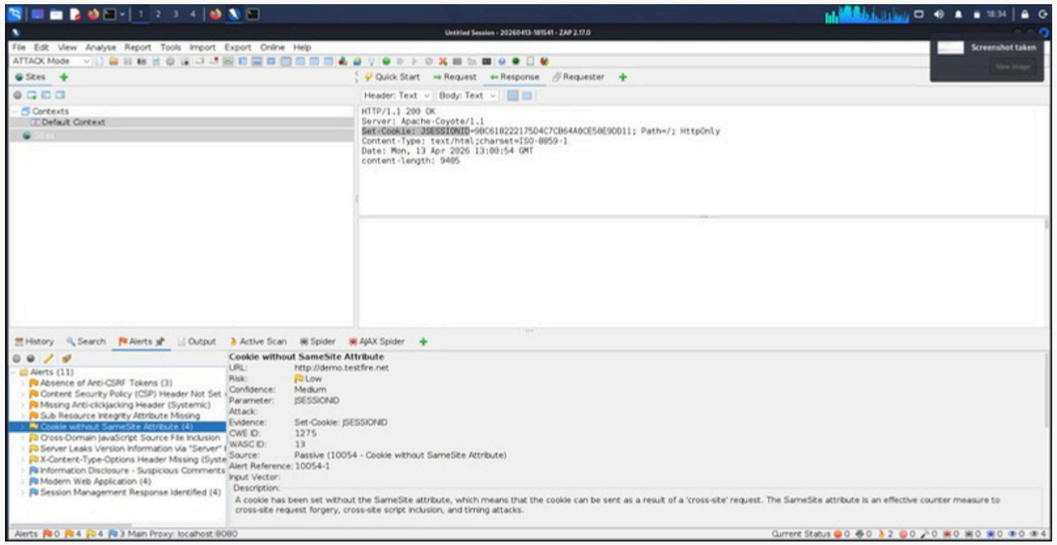
Issue: Missing Security Headers
Risk: Medium

Figure: Vulnerability scan results

Issue: Cookie Without Secure Flag

Risk: Low



Enable security headers
Use secure cookies
Avoid exposing sensitive data

Conclusion

The application has security misconfigurations that can be fixed with proper settings.
